

AGENTIC SOFTWARE THAT EXECUTES.

A studio of two builders, applying for \$50K in Daytona credits.

TWO BUILDERS. THREE SYSTEMS IN PRODUCTION.

■ LIVE · DUE DILIGENCE

cPARX

AI-powered real-estate investment analysis. Multi-agent pipeline: legal, financial, ESG, market, technical. Live with capitalPARX AG (CH).

Go · pgvector · Claude Sonnet

■ LIVE · FINTECH

fx-signals

Multi-tenant FX, gold and crypto signal generation. Sources → relevance → generation → translation → alerts. Live: fx-signals.app.

TS · CF Workers · Supabase

■ LIVE · REGULATED SMB

Callbot

24/7 KI-Telefonassistent for German medical practices. Appointment booking, prescription intake, emergency triage. DSGVO + §203 StGB.

TS · Vapi · Sipgate · Supabase

OUR AGENTS EXPLAIN. THEY DON'T YET EXECUTE.

WHAT THEY NEED TO DO

- Run scenario models on uploaded investment teasers
- Backtest LLM-proposed signal strategies before they go live
- Rewrite document-extraction pipelines on the fly per tenant
- Run black-box compliance evals in isolated environments

WHAT THE STACK ALLOWS

- Cloudflare Workers — 30s CPU limit, stateless
- Supabase Edge Functions — also stateless, no filesystem
- Read-only LLM calls, hand-coded analysis paths
- Eval runs locally on Donald's laptop. Not great.

CODING-AGENT EXECUTION IS A **PRIMITIVE**, NOT A FEATURE.

01

Code interpreters became table stakes

OpenAI, Anthropic, Cursor, Replit — every serious agent product now executes code. The capability is no longer a differentiator; the absence is the friction.

02

EU customers need EU-resident execution

Our buyers are bound by §203 StGB, FINMA circulars, MiCA, and DSGVO. US sandbox vendors are off the table. The EU-resident managed list is short.

03

Studios compound the primitive across products

Three live products today, more shipping in 2026. A sandbox layer integrated once becomes the substrate for every future agent we build — not a single bet.

FOUR DEPLOYMENTS, ONE SANDBOX LAYER.

USE CASE · C PARX

Scenario analysis on real-estate teasers

Cap-rate sensitivity, debt-stack stress, ESG re-pricing. The DD agent writes Python/Go, Daytona runs it, results flow into the report.

USE CASE · FX SIGNAL AGENT

Backtesting LLM-proposed strategies

When the agent proposes a novel indicator, Daytona runs the backtest against our historical candle store before subscribers see it.

USE CASE · ALL PRODUCTS

Eval harnesses for compliance scenarios

BTM blacklist, emergency-trigger detection, hallucinated price levels — reproducible isolated runs with fixed prompt/model/data combos.

USE CASE · NEXT VERTICAL

Customer-facing agent execution

Tax/legal SMB on the roadmap. End users run agent-generated reports against their own data without us holding the keys.

WE PICKED YOU OVER THE OBVIOUS US VENDORS.

SUB-90MS

Cold-start that doesn't break the agent loop

Most sandbox layers cold-start in seconds. At sub-90ms, Daytona is fast enough to live inside a tool call. Cloudflare Workers can't do this for a stateful sandbox.

EU

Residency our customers already audit for

Frankfurt-resident execution lines up with our Supabase + Cloudflare EU stack. We don't have to re-explain compliance to Bernard's medical-practice prospects.

PaaS

Managed, not yet-another-system-to-run

Two-person studio. We can't operate a sandbox cluster. The fully managed shape matches our infra-light bias — same reason we picked Supabase over self-hosted Postgres.

"LIVE IN PRODUCTION" MEANS LIVE IN PRODUCTION.

cPARX

v0.1.0.0 SHIPPED · APRIL 2026

Four-week prototype, 80 dev-hours, €6,800 budget. Handed over to capitalPARX AG (Engelberg, CH). Multi-agent DD pipeline: legal, financial, ESG, market, technical. Eleven ADRs documenting non-trivial decisions.

FX-SIGNALS

LIVE · `fx-signals.app`

Multi-tenant signal generation across FX, gold, crypto. 6 Cloudflare Workers + Supabase Edge Functions. Claude Sonnet primary, OpenAI GPT-5 fallback, German translation, cross-source confirmation, semantic dedup.

CALLBOT

MVP SHIPPING · SUMMER 2026

KI-Telefonassistent for German medical practices. Vapi + Sipgate + Supabase Frankfurt. EU AI Act Art. 52 disclosure enforced in code. BTM blacklist hard-coded. First pilots being scoped now.

Three production codebases. Zero VC dollars. Bootstrapped.

A STUDIO OF TWO. BUILT IN GERMANY.

TECHNICAL · CO-FOUNDER

DONALD VLAHOVIC

Architecture, code, operations. Spent the last few years building agentic AI products inside fast-moving organisations — most recently at neuroflash (GenAI marketing platform, growth-stage). Founded Factiv because the agentic shift demanded a place to build the systems he couldn't ship inside a single-product company.

donald@factiv.eu

COMMERCIAL · CO-FOUNDER

BERNARD PERANIC

Customer side. Discovery, scoping, onboarding — the human conversation that has to happen before any code is written. 25 years in DACH commercial work, deep in healthcare and adjacent verticals. Owns the messy, slow, relational front-end of selling to regulated EU SMBs.

bernard@factiv.eu

\$50K

DAYTONA CREDITS

WHAT WE'LL DO WITH IT

- Integrate Daytona into the cPARX DD pipeline as the scenario-modelling sandbox
- Wire fx-signals to Daytona for sandboxed backtesting of LLM-proposed strategies
- Move eval harnesses off Donald's laptop into reproducible sandboxed runs
- Publish a public write-up of the integration patterns once two products are live
